

Dear Partner,

Although the summer is high, work won't stop for a second at Univer's site #2.

The technology equipment we ordered in July has arrived, and thanks to the preparatory work, the installation of the equipment as well as the piping, utility pipelines, electric wiring and pneumatic connections have been completed.

The refurbishment works – new paving, concrete surfaces and fence panels – are currently under way, and will lend the site European quality look. Several subcontractors co-operate to meet the scheduled deadlines.

Thank you for your attention.
